Statement of competence

Team Defective Cowboys is composed of computer science experts, coming from many backgrounds, that have all undergone many months of intensive training in the field of digital forensics under the guidance and supervision of world class tutors, going through many lab activities and obtaining substantial amounts of knowledge and know-how of digital forensics investigation.

1 DESCRIPTION OF CRIME

1.1 FUNCTIONAL ANALYSIS

During the investigation, we have discovered multiple user accounts with names aligning them to the suspect and other people. We have identified that users of accounts aligning with the suspect, John Doe and Ben Forbes have engaged in illegal activities such as possession and distribution of materials of ornithological nature.

Mr. John Doe downloaded files of an ornithological nature (Subsection 4.3.8), then attempted to hide illicit data (Subsection 4.3.2, Subsection 4.3.3 and Subsection 4.3.4), accessed images and sound files of birds (Subsection 4.2.1 and Subsection 4.2.2) and exchanged pictures through email with Mr. Ben Forbes.

Mr. Ben Forbes involved himself in the distribution and possession of ornithological files. He held conversations through email with Mr. Doe, sending ornithological materials to him, as well as thanking him for material he has provided. There is a high possibility that they are friends due to the way emails had been written – informal, some with comedic stories regarding birds.

1.2 TEMPORAL ANALYSIS – TIMELINE RECONSTRUCTION

15/10/2004

18:53:39 – John Doe receives an email from Ben Forbes of a comical nature.

16/10/2004

18:53:39 – John Doe receives an email from a mailing list about bird identification.

24/01/2005

15:56:49 – John Doe's user account was simultaneously made with other system accounts. This indicates that the Operating System was either installed on that date or was restored due to the access to rstrui.exe at 15:49:50.

16:32:28 – Mozilla Thunderbird was installed on John Doe's account.

02/02/2005

14:25:59 to 14:26:02 – Website files from a bird related site were saved to John Doe's machine in "C:\Documents and Settings\johndoe\My Documents\aa010703a_files\"

14:28:19 – "**wbpremiums.jpg**", bird food image, was saved on the machine in "C:\Documents and Settings\johndoe\My Documents\My Pictures"

14:29:30 – "**nestboxtips.txt**" was created in "C:\Documents and Settings\johndoe\My Documents"

14:43:35 – Image of "**The Bird**" movie was saved onto the machine.

14:50:55 – regedit.exe was accessed.

15:08:39 – Bob's account was created on the machine.

15:11:51 – "**kakapo.ram**", a RealPlayer file, was saved to "C:\Documents and Settings\johndoe\My Documents"

15:12:09 – John Doe downloaded "**dawn.ram**"

15:25:10 – Ten images of ornithological nature hidden in "C:\Windows\CrouchingKokao.dll" were modified.

16:25:10 – One file in the recycling bin was modified, twenty-three more were changed in the unallocated volume.

16:35:10 – John Doe accessed the tool used to create the encrypted gpg file.

16:46:00 – "**birdpics.gpg**" was created as an encrypted file.

17:00:18 – Adobe Reader was installed on John Doe's account.

03/02/2005

11:42:20 – "Df1.jpg" was sent to the recycling bin in the hidden partition. It appears to be the same as "blue_bird2.jpg". Eleven of the modified files from the past day marked as "created in the unallocated file".

12:22:52 - John Doe downloaded "**aggressive song.wav**" to a USB Flash Drive.

14:17:42 – Doc1.doc was created and modified in “C:\Documents and Settings\johndoe\My Documents\My Music”.

15:00:19 – “**babyscot vyoung.jpg**” was downloaded to “C:\Documents and Settings\johndoe\My Documents\My Pictures”.

15:00:27 – “**babyscot 2weeks1.jpg**” was downloaded to “C:\Documents and Settings\johndoe\My Documents\My Pictures”.

15:01:38 – “**177.jpg**” was downloaded to “C:\Documents and Settings\johndoe\My Documents\My Pictures”.

15:02:45 – “**ostbk2b2.htm**” was downloaded to “C:\Documents and Settings\johndoe\My Documents\”.

15:04:48 – “**birdtrans2.jpg**” was downloaded to John Doe’s Desktop directory.

15:05:03 – “**chicks2.jpg**” was downloaded to “C:\Documents and Settings\johndoe\My Documents\My Pictures”.

15:05:44 – “**newbies2.jpg**” was downloaded to “C:\Documents and Settings\johndoe\My Documents\”.

15:06:42 – John Doe downloaded “**ready2fledge.jpg**” to “C:\Documents and Settings\bob\My Documents/My Music”.

15:42:16 – Three images of bird costumes were saved to “C:\Program Files\”

08/02/2005

14:13:26 – John Doe received an email from Ben Forbes with three attached images.

15:35:27 – John Doe received another email from Ben Forbes with five more images.

09/02/2005

11:28:00 – John Doe downloaded “**birds.zip**”

13:50:37 – “**tx_birds.exe**”, extracted from birds.zip, is a screensaver of ornithological nature. It’s used multiple times both from birds.zip and “C:\WINDOWS”.

16:56:50 – “**stuf.doc**” was created and modified on the machine.

17:04:04 – Realplay.exe was used.

17:10:01 – The machine switches off for the last time.

2 DESCRIPTION OF INVESTIGATION

2.1 JOB DESCRIPTION AND INSTRUCTIONS

Abertay and Police Scotland have asked team Defective Cowboys to investigate allegations that John Doe has possessed illegal material that is considered ornithological in nature. The team will be looking to uncover images and videos of birds, which may also extend to bird related material like websites, documents, and chat related material.

The machine that was to undergo forensic investigation, was imaged. The resulting disk image was then examined by team Defective Cowboys.

2.2 DESCRIPTION OF RECOVERED/EXAMINED ITEMS

The machine was found in powered on state, which means that volatile data could be potentially captured. Using a process called “live imaging”, an exact copy of the disk was created and securely transferred to our labs for later examination and investigation.

The image of the physical disc drive investigated by our organization had the device id of 1b12dd29-19ff-45b0-83df-3d9db7b6410d and was 5.76Gb in size. The evidence is very much relevant to the investigation and the image does not seem damaged. Thus, will be admissible as evidence in court.

When analysing the disk drive image our team uncovered images, documents, internet history, registry information and PDF and doc files. These will be referred to later in the report and will also be provided in multiple Appendices.

List of examined productions

Inventory	Description	Device ID	Recovered/Examined
johnDoe.dd	Disk image file	1b12dd29-19ff-45b0-83df-3d9db7b6410d	Examined

3 METHODOLOGY

3.1 IMAGE PREPARATION

The image of the suspect's drive was received at our lab, it was then copied into an encrypted .gz archive file in order to ascertain that its unchanged state was preserved. The image was sent over a private network to ensure it would not be altered, deleted, or intercepted by a third party. To ensure that the image file was not altered, we took a checksum of the disc drive, which was an MD-5 algorithm, then compared it with the checksum D63DD1B8917CA28BAC7C955 FC3B6CD25 provided by the police team.

The hash comparison was done on HxD by going to Analysis >> Checksums, then selecting MD5 and clicking on OK to generate the checksum. The checksum (**Image 3.1.1**) proves that the image had not been altered. It can be seen at the bottom of the screen, but it should be noted due to a bug in HxD, it is not in view during the default state. So, the window needs to be clicked on and dragged up.

Results	Checksum	Search (0 hits)
	C:\Users\Ali\Desktop\Abertay\Digital Forensics\Assessment\johnDoe.dd	
	Algorithm	Checksum
x	MD-5	D63DD1B8917CA28BAC7C955FC3B6CD25

Image 3.1.1 – Generating MD5 hash in HxD.

A copy of the disk image was compared to the one provided to us throughout the investigation. This was done to make sure the image has not been altered and all the evidence remains the same. This was done by opening the main image and the copy in HxD then going to Analysis >> Data Comparisons to compare it (**Image 3.1.2**).

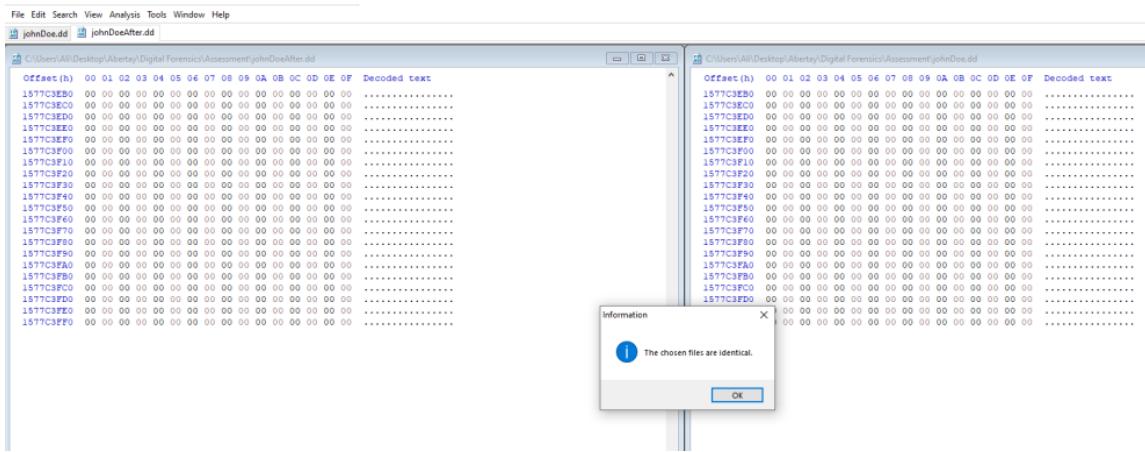

Image 3.1.2 – Comparing the hashes of the original image with the copy.

3.2 PHYSICAL AND LOGICAL SEARCHING

3.2.1 Image analysis

The team started the physical search with an analysis of the image. To do this, a multitude of tools were utilised to gather information relating the Operating System, capacity, and partitions of the HDD (Hard Disk Drive). Part of the tools used to analyse the image were also used to gather information about the suspect and the illegal activities.

3.2.2 File Carving

File carving is a procedure which discovers valid files by looking at raw data and finding specific patterns. It can be used to find some files that were deleted or discover files in places they are not expected to be.

Initially, file carving was conducted with foremost – a tool used by forensic analysts to recover data from hard drives. The tool gathers all files from an image which the analysts can use for the investigation – pictures, documents (text files, PDFs, MS Word files), executables.

The team identified a lot of pictures of birds and pictures of people who may have been a part of the crime. Foremost provided content of a hidden partition within the hard drive.

Another tool used for file carving is Autopsy – it summarises all data found on an image and allows analysts to emulate and look through the file system on it. The tool also hashes all files which is useful for blacklisting purposes as well as for finding duplicates among files. The information summarised ranged from media (such as EXIF data, documents, audio files and emails) to system files, registries and even a detailed timeline of events.

3.2.3 Registry Analysis

Registries are internal databases stored on the hard drive of Windows systems, which provide a large amount of useful information on the machine. It ranges from installed programs to user accounts, hardware details and removable devices plugged into the machine in the past.

Such information is highly valuable because it allows the investigators to see if any USBs or external Hard Drives have been attached before. Registries also store information about the physical state of the machine – such as when it has been in an on/off state.

Registries can be easily accessed using tools such as Forensic Registry EDitor, or even the Registry editor built into WIndows.

3.2.4 Browser analysis

Three browsers were identified on the suspect's machine – Internet Explorer, Mozilla Firefox and Google Chrome. Mozilla Firefox was the only one that we could determine to be used to browse the internet, while Internet Explorer was used to locally open media.

Mozilla Firefox stores information about the browsing and download history, bookmarks, as well as 'cached' - that is recently displayed, images and web pages. This positively assisted the analysts in creating an accurate timeline of events and a proper comprehension of the suspect's activities.

3.2.5 Email analysis

The analysts were able to find only two email clients on the machine – Microsoft Outlook and Mozilla Thunderbird. Of the two, the suspect had only used Mozilla Thunderbird. The browser analysis aided with research on web-based email clients, however none were found.

Mozilla Thunderbird allows the user to link multiple accounts to a single mailbox. All information is then stored in the local Application Data of the user. The two tools used during the email analysis – Autopsy and MBOX FileViewer. Autopsy loaded the data and email attachments; however, it was unable to provide an accurate timeline. MBOX FileViewer can emulate the mailbox of a user if the local inbox file is loaded into it. It provided higher accuracy in terms of received dates.

4 ANALYSIS

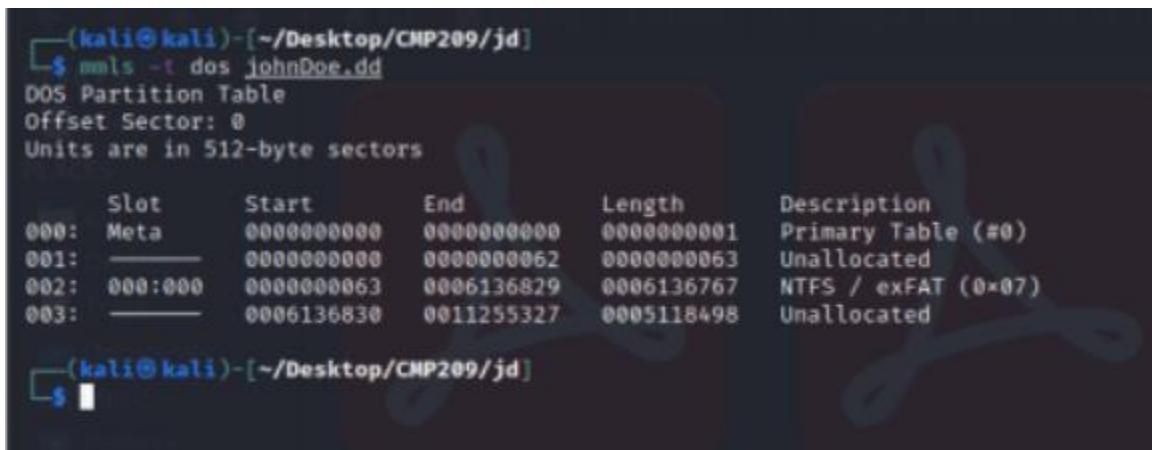

4.1 PRESERVATION

The analysts started off with passively gathering information about the image without accessing any of the files. First, the team dumped the Master Boot Record (MBR) with the use of a simple command line. (**Image 4.1.1**) The reason behind this is it can easily uncover information regarding how the space on the disks in the system was divided. From the dump it is visible that the suspect is likely using a Windows system, as suggested by the NTFS type of file system found (5th byte from the start of the boot record – 80 01 01 00 **07**). The rest of the boot record shows that the suspect has only one partition.

Image 4.1.1 – Master Boot Record dump.

Afterwards, the partition table is also dumped. (**Image 4.1.2**) The results of that operation show that together with the previously discovered partition, which was appropriately marked and easily accessible, there are two unallocated spaces on the disk. Sectors are the smallest ‘blocks’ that any hard drive is divided into. They are all of fixed size, and the operating systems cannot load anything smaller. Because of their

fixed size, they are often used to describe the physical layout of partitions on the disk. First of the unallocated spaces start at sector 00 and end at sector 62, the second starts at 6136830 and ends at 11255327. The first space has a small chance of being used to hide something inside and was likely created by Windows, as this system automatically keeps a small unallocated space in case changes are made to the partition tables. The latter, however, is quite big - almost as big as the allocated NTFS partition. The hidden partition was further investigated in the Physical Search (4.2) and Logical Search (4.3) subsections, as it is very likely to be left intentionally and could be used to conceal files within it.

```

```

Image 4.1.2 – Partition table dump.

4.2 PHYSICAL SEARCH

4.2.1 Images

The team managed to identify a total of one hundred and seventy-nine instances of ornithological images. This number, however, includes duplicates that were found for many files. All the illicit and questionable images, as well as indications of their duplicates are indexed in Appendix A and provided in appendices B through F. Those images were found in both the main partition as well as in the ‘unallocated’ space on the disk. They ranged between pictures of birds in their natural habitats, birds being held by

people, birds with transmitters on their backs to drawings, costumes, bird seeds, bird houses, sighting maps and hotel/restaurant ads in those sighting areas. The locations and hotels/restaurant names were passed to the authorities as other criminals may be at said locations.

A large amount of the images comes from an unidentified source. Some of them can be recovered from the deleted files. The EXIF metadata, which holds information about the file itself, rather than the actual content, can also be extracted from several images. From this, the analysts identified that 18 of the illicit along with numerous questionable images were taken with a “Canon Powershot SD100” (Appendix A, Appendix B and Appendix F) camera in 2004. The photos taken with this camera were of birds, birds with transmitters and people in bird sighting locations. There are also photos of people making/interfering with bird houses and looking for birds. They can be found in appendices B and C.

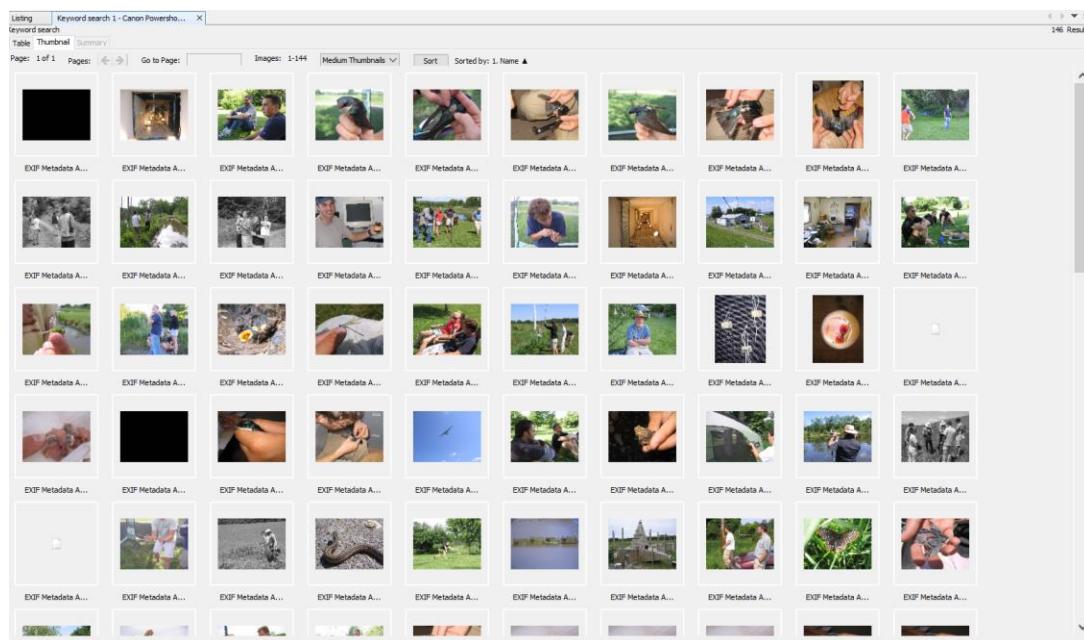

Image 4.2.1 – Pictures taken with Canon Powershot SD100.

Other images were identified as originating from the internet. Some of them were downloaded explicitly, while others have been sent to the suspect by Mr. Ben Forbes as part of a mutual exchange of illicit images. The analysts identified that some of the images sent by Mr. Ben Forbes were taken with “Canon EOS-1DS” (Appendix D) and

“Sony Cybershot” (Appendix E) cameras in 2002 and 2003, respectively. The contents of the relevant email messages and list of attached images can be found in Appendix I.

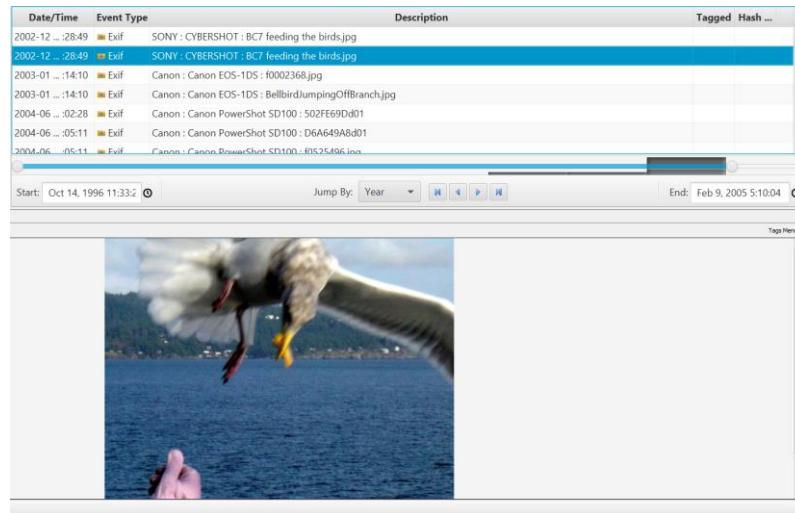

Image 4.2.2 – Picture taken with Sony Cybershot.

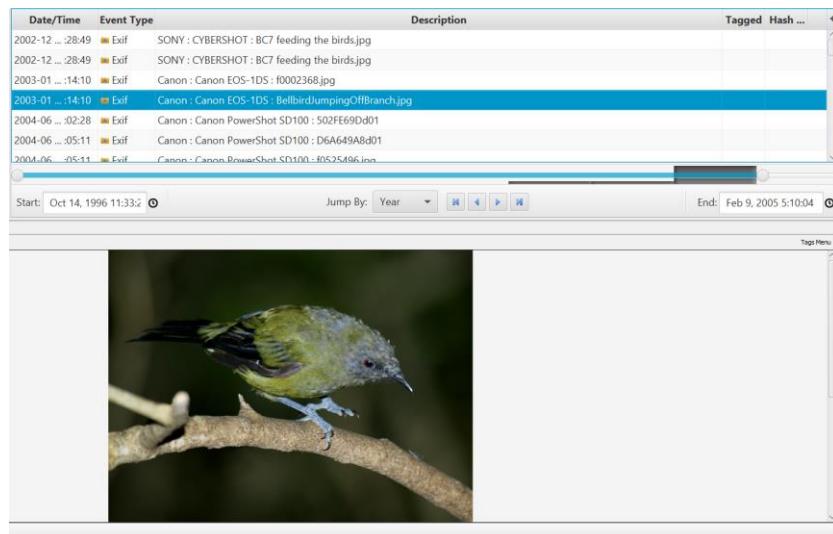

Image 4.2.3 – Picture taken with Canon EOS-1DS.

4.2.2 Audio files

The analysts identified a total of three audio files in relation with the accusations of the suspect. All three were downloaded through the Mozilla Firefox browser as their

artifacts exist in the browsing history (kakapo.ram and dawn.ram) and the download history (dawn.ram and aggressive_song.wav) of the software. Both history files can be found in the Application Data folder of the Firefox browser (Application Data/Mozilla/Firefox/Profiles) in a MorkDB format. (Appendix G and Appendix H)

“Kakapo.ram” and “dawn.ram” were both accessed through the suspect’s browser on the 2nd of Feb 2005 at 15:11:41 and 15:12:06 GMT. Ram is an extension used by RealMedia Player and is used to play audio data through the web. Both were linked to a .rmd file hosted at “<http://audio.pbs.org/songs>”. The audio files contain the songs of the Dawn bird, as well as the Kakapo, which is a rare species of parrots in New Zealand. The other audio file was saved as “aggressive_song.wav”, which is a Waveform file. The file was downloaded from “http://whyfiles.org/shorties/104chick_sex/images/aggressive_song.wav”. Later, the same file was copied to “C:\Program Files/MSN” which makes it accessible to all users. The copy occurs on the 9th of Feb 2005 at 17:00:20 GMT.

4.3 LOGICAL SEARCH

4.3.1 Registry Analysis

During the examination of the registry, the analysts used a Linux tool called fred (Forensic Registry Editor). The tool allows an analyst to look through the registries and extract useful information from them.

The first thing that the team did was look through the “SAM” hive - or part of the database. “SAM” stands for System Account Manager and it holds data regarding the groups, user accounts, etc. The analysts identified three accounts that were not system accounts and belonged to human users of the machine – ‘johndoe’, ‘jane’ and ‘bob’. Mr. John Doe’s account was created on the 24th of January 2005 together with the system accounts. Jane and Bob’s accounts were created on the 2nd of February with almost two and a half hours delay between the creations. (**Image 4.3.1.1**)

SUPPORT_388945a0	2005/01/24 15:42:04

Image 4.3.1.1 – List of user accounts and creation dates.

Afterwards, the team looked through the “system” hive. That hive stores information about the machine as a whole – mounted devices, connected USBs, partitions of the disks and many more. From it the analysts identified a lot of crucial information. To begin with, a USB Flash Drive was present in the USBSTOR node, meaning that one has been connected to the machine and is a possible source of evidence. Later, the team found out (using Autopsy and fred), that the USB Flash Drive was made by Phison Electronics and marked in the system as Drive E. The “MountedDevices” node was used to determine the letter assigned to that USB device, as well as indicated, that there also is a CD-Rom Drive (that was likely used to install Windows to the hard drive) and two partitions – Drive C and Drive F. (**Image 4.3.1.2**) Further investigation proved that what was labeled as Drive F became the unallocated partition seen on **Image 4.1.2.**, likely in an attempt to conceal its existence or contents. Lastly, the analysts found the last shutdown time of the machine inside the Windows node – 9th of February 2005 at 17:10:01 GMT.

\DosDevices\A:	REG_BINARY 5c 00 3f 00 3f 00 5c 00 46 00 44 00 43 00 23 00 47 00 45 00 4e 00 45 00 52 00 49 00 43 00 5f 00 46 00

\DosDevices\F:	REG_BINARY b8 dd b8 dd 00 fc 47 bb 00 00 00 00

Image 4.3.1.2 – List of Mounted Devices.

Looking through the “software” and “NATUSER.DAT” hives provided the analysts with information about what software is installed on the machine and allowed to focus the investigation specifically on the suspect’s account. A few applications stood out – Windows Privacy Tools (Which is a tool that can be used to encrypt files, rendering it unreadable without the correct secret, decryption key), Mozilla Firefox (browser), Mozilla

Thunderbird (mail client), RealPlayer (web audio player) and Adobe Acrobat Reader (PDF Viewer).

4.3.2 Hidden Partition

The team accessed the big ‘unallocated’ part of the disk using Autopsy and found hidden images and documents. The analysts identified a total of twenty-two images of ornithological nature, and a document titled guide.doc, a Microsoft Word document containing a thorough guide about “Enjoying your first birding field trip” (Appendix K). An additional image was found in the recycling bin with the info file claiming that it was from “Drive F”, which confirms that this ‘unallocated’ space is a direct result of deliberate attempt to hide its contents, by making it appear to be empty and unused, to every user of the system, as well as to the operating system itself.

4.3.3 PDF, Documents and Hidden Files

The analysts identified a multitude of documents of ornithological nature in the suspect’s drive. Three PDF files (**Image 4.3.3.1**) were found in the recycling bin of “Drive C”. The team managed to identify that all of them were from the USB Flash Drive before the suspect deleted them. Three more PDF files were identified through file carving with Autopsy, all of which were of ornithological nature. An additional PDF was found in the Windows Privacy Tools directory providing a thorough guide on how to encrypt and decrypt files with the tool.

C:\\Documents and Settings\\johndoe\\My Documents\\57ab_perth.pdf
```

Image 4.3.3.1 – Deleted PDF files.

A file called “birdwatching.doc” was found within “Drive C” in the image, meaning that all users had access to it. The file provided a guide on birdwatching in Thailand.

“Doc1.doc” was found in “My Music” directory of the suspect. It appears empty but the file size was too big. The team ran foremost on the document and identified a hidden picture of ornithological nature inside. (**Image 4.3.3.2**) Two more files of interest were identified – “stuf.doc” and “Dear Fred.doc”. The former provides information regarding a conversation between the accused and an anonymous figure. It can be assumed that this figure is Mr. Ben Forbes, as he and the suspect have distributed bird pictures between each other. The latter is a message from Mr. Bob to an individual named Fred, however this message was not found to be of relevance to this case.

00000010.jpg
```

Image 4.3.3.2 – Running foremost on Doc1.doc.

“nestboxtips.txt” is a file found in the suspect’s “My Documents” directory. It provides tips on how to make nest boxes for the spring/summer period. Another directory can be found in “My Documents” which seems to be a directory (aa010703a_files) containing the files of a website which the accused downloaded on the 2nd of February 2005 at 14:26:00. Additional files were downloaded roughly two hours later. The main website file can be accessed from “My Documents/aa010703a.htm”

Contents of all documents of interest can be found in Appendix K.

One more file can be noted – “FontailFrontView.exe”. It can be found in “C:\WINDOWS\mui” and it appears to be a jpg image with an extension mismatch. This proves that the accused made more attempts to hide files of ornithological nature. (Appendix A – index 24, Appendix F)

4.3.4 Encrypted Files

Multiple encrypted files were found on the suspect's machine. Most of them were password locked deleted PDF files. However, the team was unable to crack the password for them nor identify their initial location and when were they deleted.

Another encrypted file was found in John Doe's documents in the main partition – birdpics.gpg. To crack it, the analysts had to obtain secring.gpg, a key without which the file cannot be decrypted. The file was stored in the "C:\Documents And Settings\johndoe\Application Data\GnuPG\" directory. It was extracted from an image loopback then converted to secring.jtr to crack the password. Afterwards, the key is imported to the analyst's machine. (**Image 4.3.4.1**)

Image 4.3.4.1 – Cracking the password with JohnTheRipper and importing key.

After the key was imported, the analysts successfully decrypted the file and found out it contains an archive. Extracting the archive exports five images. Using foremost on the archive proves that all five files are pictures originating from the USB Flash Drive (E:\). (**Image 4.3.4.2**) All of the images found in the decrypted archive were indexed in appendix A and can be found in appendix F.

Image 4.3.4.2 – Decrypting the gpg file.

4.3.5 Emails

The analysts recovered four emails from the mailing client of the suspect. Three of them were from Mr. Ben Forbes. Some of those emails had illicit ornithological images attached to them. The fourth one was sent from a bird related mailing list. The team also identified that the password of the mailing client is the same as the password used to encrypt birdpics.gpg. It was stored locally in the Application Data directory, encoded in Base64 (YXJyYW4= - arran). The linked email account was “jdoe@example.com”. The analysts first checked them through Autopsy, but the dates were inaccurate, another piece of software called MBOX Viewer proved more helpful in recovering correct time information. (**Image 4.3.5.1**) The team could not identify any sent or deleted mail.

✉️	ben@example.org	expensive birds	jdoe@example.com	2/9/2005 12:08:01 PM	10/15/2004 6:51:39 PM	1

Image 4.3.5.1 – Received emails.

On 15th of October 2004 at 18:51:39 GMT, Mr. John Doe received an email from Mr. Ben Forbes (“ben@example.org”), the subject of which was “expensive birds”. The email consisted of a joke about an expensive parrot being eaten. (Appendix I – Image 1)

On Saturday 16th of October 2004 at 18:51:39 GMT, Mr. John Doe received an email from a mailing list called “Bird Fanciers” (“mailinglist@birds.example.com”). It provides a detailed guide on bird identification. (Appendix I – Image 2)

On Tuesday 8th of February 2005 at 14:13:26 GMT, Mr. John Doe received another email from Mr. Ben Forbes with the subject being “good pics”. The email has a short message stating that Forbes believes that the suspect would enjoy the attached images. The first attachment is named “7EYBTELF1KAN.jpg” and is an image of two parrots in a white cage. The second attachment, “IMG_3937_filtered.jpg”, is an image of a blue bird on a tree branch. The last attachment, “cute_penguin.jpg”, appears to be an image of balloons shaped as a penguin. (Appendix I – Images 3 & 4) (Appendices A and F with indexes 36, 22, 14 respectively)

On Tuesday 8th of February 2005 at 15:35:27 GMT, the accused received another email from Forbes titled “some more good ones”. In the email Mr. Ben Forbes thanks John for he sent him then sends some which he personally likes. This exchange, together with illicit attachments being found in email conversation between the suspect and Mr Forbes, shows that both individuals are knowingly involved in not only owning but also distributing illegal ornithological material. A total of 5 images were attached to this email, all of which were images of birds. (**Image 4.3.8**) (Appendix I – Image 5 & 6)

Image 4.3.8 – Attachments from email.

4.3.6 Firefox Bookmarks

Three bookmarks were identified in the local browsing cache inside the Application Data directory of John Doe's account. All of them are related to this case – “Free Bird Wallpaper - Bald Eagle Albatross Owl Falcon 1024x768”, “Alphabetical Index of Birds” and “Chickadee Karaoke” (Appendix J – Bookmarks). Those bookmarks imply that Mr. John Doe knew about those sites and wanted to keep their web addresses.

4.3.7 Firefox Browsing History

The analysts found the browsing history of the accused. It was stored in the “C:Documents And Settings\johndoe\Application Data\Mozilla\Firefox\Profiles\”. The file is called history.dat and uses MorkDB format to store the history data. (Appendix G) A script was used to convert it to a human readable format then the data stamps were decoded as they were stored as Unix Time Stamps, which are hard to interpret by a human, without doing mathematical operations.

The browser was first launched on the 24th of January 2005 when the suspect downloaded the Mozilla Thunderbird client. More history essential to this case is on the 2nd, 3rd and 9th of February 2005.

On the 2nd of February, the suspect searched for the keyword “birds” in Google. Shortly after he opens a page “www.pbs.org” which contains audio files. A page ad, possibly about birds, lead the suspect to an Amazon webpage with the keyword “birds” in the book section. John Doe spent roughly one minute on the website during which he checked two books – “Garden Birds (Collins Gem) Paperback – 12 April 2012 by Stephen Moss”, and “The Secret Lives of Garden Birds Paperback – Illustrated, 30 April 2004 by Dominic Couzens”.

After leaving Amazon.co.uk, the suspect searched for bird wallpapers in google which led him to “www.naturewallpaper.net”. The accused remained on that website from 14:15:51 until 14:18:45 browsing through different subpages and images.

A minute later Mr. John Doe clicked on an ad which led to “uk.shop.com” with ‘bald eagle’ as a search keyword. This led him to a web page of a website possibly selling a

video named “Choices Direct Movies: Bird Safari Bird Watcher’s Paradise”. The web page selling the video cannot be accessed as the analysts are redirected to the main webpage.

Later, Mr. John Doe conducted another search in Google about “bird stories” at 14:22:25 GMT. The search led him to a website called “about.com”, where he stayed until 14:26:43 GMT. This specific website does not exist anymore. However, the analysts identified an enormous number of common keywords between the details of the website and the documents in aa010703aa_files. There is a high possibility that this is the website which the suspect saved to the hard drive.

Another page ad led Mr. John Doe to a website called “haiths.com”. This is a commerce website which sells bird food, nests, accessories, baths and feeders. Mr. John Doe spent around two minutes on this website.

Ten minutes later the suspect looked up the movie “The Birds” on IMDB and “videodetective.com”. After this the suspect spent a lot of time browsing the news page of BBC then went back to “pbs.com” at 15:11:41 GMT accessing kakapo.ram (missing from download history) and dawn.ram. (Refer to subsection 4.2.2 Audio Files) (Appendix G and Appendix H).

The browsing history during the 2nd of February ends with the suspect accessing the download webpages of the Windows Privacy Tools at 15:57:51 GMT (missing from download history) and Adobe Acrobat Reader at 16:53:13 GMT.

The history on the 3rd of February is much shorter. The suspect searched for “bird mating calls” and “young chicks” on Google and downloaded a multitude of files – images, one .htm file (Refer to appendix K) and a .wav file. (Refer to subsection 4.2.2 Audio Files).

On the 9th of February, the suspects searched for bird wallpapers and downloaded a file called birds.zip from “traveltex.com”. This specific file is missing from the image, but the executable and screensaver files remain in C:\WINDOWS\”.

4.3.8 Download History

The analysts managed to obtain a log of the Firefox download history located in the “C:\Documents And Settings\johndoe\Application Data\Mozilla\Firefox\Profiles\w4nf3obl.default” directory (Appendix H). The log showed a multitude of ornithological material and software which the suspect used being downloaded to the machine.

On Wednesday, 2nd of February 2005, the suspect downloaded two files:

- 15:12:09 GMT a 1KB file hosted on “pbs.org”. It is named “dawn.ram” and is saved in the TEMP directory with a reduced size of 34B. The file has a link to a .rmd file hosted at “<https://www.pbs.org/lifeofbirds/songs/dawn.rmd>”, containing audio of “the dawn bird song”.
- 16:53:20 GMT, an executable file was downloaded from Adobe’s website. The file is saved to the suspect’s Desktop. It still exists in that location and it was used to install Adobe Acrobat Reader, which the suspect used to open PDF files.

On Thursday, 3rd of February 2005, the suspect downloaded a total of nine files onto the machine:

- 12:22:52 GMT – a 716KB “aggresive_song.wav” file hosted at “http://whyfiles.org/shorties/104chick_sex/images/aggressive_song.wav”. It is saved onto the “Drive E:” which is a removable USB Flash Storage. The website itself is not accessible anymore, however, the file was also found in the “C:\Program Files\MSN” directory. It appears to be an 8 second audio recording of bird sounds.
- 15:00:19 GMT and 15:00:27 GMT – two images called “babyscot_vyoung.jpg” (38KB) and “babyscot_2weeks1.jpg” (33KB), both of which were downloaded from the same website – “<http://freespace.virgin.net/cobbler.budgies/images/>”. (Appendix A – indexes 19 and 20, Appendix F) The former features three featherless birds near three unhatched eggs and two arrows pointing at them. The latter presumably features the same three birds at the age of two weeks. Both images are saved in the “My Pictures” directory of John Doe’s account.
- 15:01:38 GMT – a 9KB image called “177.jpg” from “<http://www.insaneanimals.com/items/>” and is also saved in the “My Pictures”

directory. (Appendix A – index 40, Appendix F) The image can still be found in that location. It features a young yellow chick next to an egg with captions reading “Everyone says you’re too young for me”.

- 15:02:45 GMT – a 4KB .htm file from “<http://www.cvm.okstate.edu/instructions/kocan/ostrich/>” called “ostbk2b2.htm”. It is saved to Doe’s “My Documents” directory and it still exists there. The file is a web page providing a guide on how to take care of birds from small chicks to adulthood. (Appendix K – HTML Documents)
- 15:04:48 GMT, 15:05:03 GMT, 15:05:44 GMT, 15:06:42 GMT – four images (54KB, 38KB, 58KB and 77KB respectively) from “<http://people.cornell.edu/pages/sah67/>” called “newbies2.jpg”, “chicks2.jpg”, “birdtrans2.jpg” and “ready2fledge.jpg” were downloaded. (Appendix A – indexes 4, 5, 16 and 18 respectively, Appendix F) The first image is saved to the suspect’s Desktop directory and it still appears to exist there. It appears to be an image of a bird being held by the wings by a man. The bird has something on its back which looks like a tracker. The other two images are saved to “My Pictures” and “My Documents” respectively, both still exist and remain the same size. They appear to be images of five and 4 newly-hatched birds respectively. It is possible that they are the same birds. The last image was downloaded to the “My Music” directory of Bob’s account. The image still exists there with the same file size and appears to be an image of a group of young birds. The file download being contained in this history file proves that John Doe downloaded the file into that location and not Bob.

4.3.9 Software Prefetch Analysis

Software prefetch is a technique used by the operating system to speed up its operation, it will create an entry for executable files run for the first time from a location.

The prefetch analysis was conducted in Autopsy. (**Image 4.3.9**) Some of the software used by the suspect proves that he was interactive with ornithologically related media and documents and that he may have attempted to cover their actions.

Adobe Acrobat Reader is a piece of software used to open PDF files. It was used to access the PDF files which were found on the suspect's drive.

RealPlayer is used to open .ram files. Only two such files were present on the drive and both were songs of birds, confirming that the suspect has opened those files.

Windows Privacy Tools (WinPT) and GnuPG are tools used to encrypt and decrypt data. The presence of **birdpics.gpg** is a proof that the suspect tried to hide images by encrypting them.

Two instances of prefetch data for tx_birds.exe were found. This shows that the file was run two different times – once directly from birds.zip and once from “WINDOWS” directory on “Drive C”, confirming that the suspect has interacted with this file.

Image 4.3.9 – Prefetch data from Autopsy.

5 CONCLUSION

During the investigation, the analysts identified a total of 179 illicit images, including duplicate files. They ranged from bird pictures, pictures of costumes, cartoon pictures, bird houses, seeds, as well as humans interfering with the habitat of birds and birds themselves.

A long-term contact between Mr. John Doe and Mr. Ben Forbes has been identified throughout the analysis. The contact has been established through emails, which were used to distribute images of birds between both individuals and comedic messages in relation to birds. However, due to the lack of sent mail data, we cannot ascertain that the suspect has in fact distributed illicit images, even though it was implied in the conversation between him and Mr. Forbes.

John Doe has also accessed a lot of websites providing information about bird-related books, guides and movies, from which he has downloaded many illicit files. A multitude of the accessed websites hosted images and audio files of ornithological nature. One of the websites was a shop for bird accessories, food, cages etc., together with guides on how to take care of baby birds, indicating a possibility of the suspect having plans to keep birds. Many files found also indicated that the suspect might be interested in engaging in bird watching himself.

The suspect has made many attempts to hide all the bird-related files indicating that they were fully aware of being in possession of said files and their illegal nature. One of said attempts is to hide images and documents by hiding a partition, disguising it as an unallocated, empty space, which was achieved through editing the partition table of the hard drive. Other attempts at hiding illicit files involved hiding images within other files, changing and mismatching their file type extension as well as encrypting archives with illicit images. Mr. John Doe has also deleted files, saved some to a removable USB flash drive.

To conclude, the investigation was able to identify many illegal files obtained and kept in possession by the suspect. The suspect has also attempted to hide those files, indicating that they were aware of their illegal nature. The suspect has been in contact with Mr. Ben Forbes, from whom he has received multiple illegal images. While we were unable to find evidence for it, their exchange implies that the suspect has at some point shared illegal material with Mr. Ben Forbes as well.

38	40m.jpg	A movie poster for Alfred Hitchcock's 'The Birds'. It features a woman in a blue raincoat looking back over her shoulder while a young girl looks on from behind her. A large, dark bird is silhouetted against a bright sky in the background. The title 'ALFRED HITCHCOCK THE BIRDS' is at the top, and 'DEPT. OF MISERABLE SICKNESS' is at the bottom.
39	3328DD4Ed01	A photograph of a person standing on a rocky cliff edge, looking down at a large bird perched on the rocks. The bird has long legs and a long beak. The background shows a vast, hilly landscape under a clear sky. A small 'Tous' logo is visible in the bottom right corner.
40	177.jpg	A close-up photograph of a fluffy, yellow chick resting next to a large, white egg. They are both nestled in a bed of straw or hay. The chick is facing towards the left. At the bottom of the image, there is a white text box containing the quote 'Everyone says you're too young for me.'

128	f0545184.jpg	A black and white photograph showing four individuals in a wooded setting. From left to right: a person wearing a cap and holding binoculars; a man in a light-colored polo shirt and cargo pants; a man in a dark vest over a light shirt; and a person in a white t-shirt holding binoculars. They appear to be looking towards the right side of the frame.
129	f0544152.jpg	A black and white photograph of five people walking away from the camera on a dirt path through a grassy, somewhat overgrown area. The individuals are dressed in casual outdoor clothing. One person in the foreground wears a hat and a vest.
131	f0493176.jpg	A color photograph of three people in a grassy field under a clear blue sky. A tall white pole stands prominently in the background. One person, wearing a dark shirt and shorts, is reaching up towards the top of the pole. Another person in a light shirt and shorts stands nearby, and a third person is crouching down on the right side of the frame.

FACILITIES

CHICKS

Young chicks can be maintained in a variety of suitable facilities. A small portable pen, 12 feet long, 4 feet wide and 2 foot high can be adequate for a number of chicks. The pen is placed on short cut grass and moved daily. Chicks are brought out to the pen after the temperature reaches above 60 F and the sun is shining. Birds can be maintained in this type of facility until the temperature drops or until weather is prohibitive. Include some type of shade and wind break as young birds are sensitive to extreme sun and wind.

Young birds should be brought indoors in the evening and maintained in a heated environment until at least 2 to 3 months of age. Temperature in indoor shelters should be maintained at least 65 F and enough room to allow the birds to exercise should be provided. In areas where weather is more severe, this period may need to be extended.

Do not provide feed at night but available water is acceptable. Feed the young birds as outlined in CARE OF YOUNG BIRDS section, prior to turning them out in the morning.

JUVENILES

Juvenile birds between 3 and 10 months of age can be maintained in a similar, but larger facility as young birds. For convenience, access to the indoor facility should be available directly from the outdoor pens. However, shelter is not needed except in extremely cold areas. The amount of space per bird, for both indoor and outdoor facilities should be increased for this age bird as compared to that available for younger chicks. Outdoor pens can be of any type of substrate but ground cover such as grass, clover, or alfalfa is ideal. Grass should be kept at a closely mowed level, especially when grass begins to dry out or turn to seed, as impactions are more common at this time. Daily mowing may be necessary during some periods of the year.

ADULTS

Pens and facilities for adults vary considerably. Most ranchers maintain adult pairs or trios in facilities that range from five thousand square feet to an acre or more. In general, the more room that can be provided, the better the situation. Common fences and line of sight access to neighboring pairs is often desirable but may not be practicable with overly aggressive males.

Housing or shade is usually provided although not always utilized. If birds are accustomed to being fed and watered in a shed they will be more easily confined when necessary and may build the nest and lay indoors. Alley-ways for movement of birds from pen to pen, access for halting, and provisions for confinement for veterinary care should be considered at the time of construction. Although surprising, most ratites do not require indoor shelter once over 6 months of age and often refuse to use such structures, independent of weather.

Fencing is dependent on personal preference and economics. Chain link is good but may result in problems related to leg and foot injuries and is not easily climbed if escape from the pen by egg gatherers is necessary. Tubular "cattle" type fence is suitable and offer some benefits and others types of woven wire fencing are routinely used.

Many ranchers are now utilizing group pens consisting of several males and numerous females in larger acreage. This appears to provide some benefits and is more nearly similar to a natural situation. Early results indicate that increased fertility, more egg numbers, and extended laying periods can be expected in this type of set up. Several acres of enclosed pasture are needed for this type of operation.

Difficulties with a group breeding situation include the inability to determine exactly the resultant chicks parentage.

This bluebird nesting box is a great way to get started making birdhouses. You do not need to miter any edges and the entire project can be completed using one 6 foot length of of 1" x 6" lumber.

Since only simple materials and tools are required, this birdhouse is also a wonderful project for Scouts, youth groups, and beginning woodworking classes.

[Click here](#) for drawings of the pieces and dimensions you will need. (A)

[Help](#)

1. Cut the wood to the dimensions in [diagram A](#). All of the pieces can be cut from one 6' length of 1" x 6" lumber.
2. Cut the front entrance hole as in [diagram B](#). This is an oval shaped hole that is 1 3/8" wide and 2 1/4" long. To begin cutting this hole, mark the dimensions on the front. Then drill one 1 3/8" circle at the top. Repeat at the bottom of the hole, overlapping the drilled holes.
3. Drill two small holes near the top of each side for ventilation.
4. Drill four small holes on the bottom for drainage.
5. Using finishing nails or wood screws, secure one of the sides to the bottom. Then secure the front and back to the same side.
6. Slip the 2nd side into place. Secure using two nails, one near the top on each side. These nails will be pivots so make sure they are across from each other.
7. Reach inside the box and push the bottom of the 2nd side outwards, making sure it can pivot outwards. If it is too tight, remove the nails and sand the edges so it is a bit smaller. Repeat until the 2nd side will pivot outwards. See [diagram C](#) for
8. Screw the eye screw near the bottom of the 2nd side. This screw is to make it easier for you to open the box occasionally to monitor it as well as to clean it out at the end of the season.
9. Drill a small hole through the front near the bottom into the 2nd side. Push a bent nail (I have a few by this point!) into the hole to keep the 2nd side closed. If you wish, use a small wood screw instead of the nail.
10. Nail or screw the roof to the nest box.
11. Mount the bluebird nest box to a pole, fence post, or tree. Be sure to use some type of predator guard to keep squirrels, snakes, raccoons, and other creatures from harming the nestlings. See the [Birdhouse Spec page](#) for the correct mounting height.

BIRDWATCHING IN THAILAND
Feathered Magic from Mangroves to Mountain tops by Antony Lynham
One of the great attractions for nature tourists visiting Thailand is the diversity of environments extending across mountain peaks, lowland rainforests, mangroves, coral reefs, farmland and urban jungles. Within a day, or even a few hours travel, one can easily make the transition between these places and witness natural marvels large and small.
For wildlife enthusiasts no group maintains interest and pleasure more than birds. While special efforts are required to see in the wild charismatic species such as elephants and primates, birds are found across the entire spectrum of environments from pristine to severely degraded areas.
Part of the attraction for birds lies in their diversity. Nine hundred and seventy eight bird species have been recorded in Thailand, approximately 10% of the world's total. At the Isthmus of Kra between latitudes 11°N, a major biogeographic transition between Indochinese and Sundac forests produces a special diversity of birds with a total of 152 species of birds reaching the northern or southern range limits of their geographic ranges.
Two-thirds of Thai birds are residents, the remainder are seasonal visitors. Locations where migrants congregate, often in large numbers, are highly accessible making Thailand a special destination for birdwatchers.
Many birds are susceptible to human disturbance because they have small geographic ranges, a result of specific habitat requirements. For example, Dugnain's babbler - a non-descript forest bird is found on Doi Chiang Dao and nowhere else in the world. Gurney's pitta are only found in lowland rainforests. Fewer than 30 birds remain in Thailand's known population at Khao Nor Chuchi, Krabi. Efforts by local and international conservation agencies strive to increase protection efforts and reafforest areas encroached by rubber farmers, though time is running out. With approximately 20% of the birds found in Thailand being globally or regionally endangered species, this makes the country a birdwatching haven for bird enthusiasts.

IDENTIFYING BIRDS
Birds are distinguished mainly by their size and shape. They range from diminutive flowerpeckers, sunbirds and white-eyes, about the size of your index finger, to lanky storks and egrets that stand almost a metre tall, and Green peafowl with its spectacular 2m tail. The form of the beak offers vital clues about the bird's diet. For example a thin red tube for sipping nectar or a sharp hook for tearing flesh. The pattern and colour of plumage can tell apart the sexes as in pheasants where males are bright and striking, and females are drab and dowdy. By far the most useful character for identification is a bird's voice. This is especially true in forests where average 90% of birds are hidden from view. The most experienced birdwatchers in the tropics know their songs and calls.

BEST TIMES TO SEE BIRDS
The nesting season is a good time to be watching birds. During this most active time in a bird's life a variety of vocalizations and behaviours are exhibited. In Thailand, as in other tropical countries, the nesting season coincides with the period when food is in abundant supply. A bird expends much energy in courting, mating, including eggs, defending a nest and feeding offspring. Most birds nest during the transition between dry and wet seasons when new leaves and grass shoots sprout. This occurs from February to June. Certain birds depend on the availability of water and nest throughout the rainy season.

Migratory birds stop during their passage into or out of the country, or as they pass through on their way to other places. Most conspicuously, half a million ducks spend their winter in Thailand, feeding and resting in wetter roosts from Chiang Saen to Thale Noi. Thousands of garganey and Lesser teal flock during January and February.

Shorebirds like sandpipers, stilts and plovers migrate long distances between nesting grounds in Eurasia and tropical Asia and wintering grounds in Australia. They stop to feed in Thailand's mudflats and mangroves during September to May where they stock up on invertebrates and crustaceans. During October, the southward migration of hawks over peninsular Thailand is an avian spectacle. Chinese goshawks, Japanese sparrowhawks, crested honey buzzards, black bazas, and others are seen coasting on thermals in their thousands daily. Less conspicuous is the blue-winged pitta, a ground dwelling bird that arrives with the rains to nest in deciduous and bamboo forests, and escapes the hot season for the wetter forests of Malaya and Sumatra.

WHERE TO WATCH
Given that many birds are denizens of certain times, places, habitats or seasons, the amateur naturalist can remember them by association.

PARKS, TEMPLES AND GARDENS
Some species like barn swallows, magpie robins, mynas and starlings can be found around Bangkok and environs. Lumpini Park, a heavily-used green area in the city centre supports a variety of birds with over 90 species having been recorded there. Temples near Bangkok and Ayutthaya preserve pockets of the natural landscape including birds such as black kites, parakeets and woodland birds that are characteristic of the habitats.

RICE PADDIES, HEDGES AND FORESTS
Rice paddies, marshes and ponds away from built-up areas support breeding populations of Asian openbill stork and many other waterbirds.

Key sites: Suphan Buri-Ayutthaya and Beung Boraphet.

PEAT SWAMP FORESTS
Among the last vestiges of Thailand's peat swamp forest at Phru To Daeng or Chalerm Phrakiat Wildlife Sanctuary in Narathiwat supports Lesser adjutants, a kind of stork, along with several birds characteristic of Sundac forests.

LAKES, RIVER SANDBANKS AND REEDBEDS
Lakes, river sandbanks and reedbeds preserve unique assemblages of wintering waterfowl and perching birds.

Key sites: Chiang Saen, Fang Hot Springs, and Thaton.

AGRICULTURAL LANDSCAPES
Agricultural landscapes in the north support species that tolerate human presence and include kites, rollers, bee-eaters, coucals, weavers and bulbuls.

SANDY BEACHES, MANGROVE AND TIDAL FLATS
Sandy beaches are attractive to tourists but are barren habitats for birds, while little-visited mangroves and tidal flats that are rich in nutrients and microorganisms, are favoured feeding haunts for migrant waders. Some birds like the Brown-winged kingfisher and Mangrove pitta, are entirely restricted to mangroves while Mangrove whistlers and flycatchers rarely leave the area.

FORESTS
Mountain forests. Thai birds depend upon forests for their survival. Rainforests in the extreme south support the greatest avian diversity, while seasonally dry dipterocarp, mixed deciduous and evergreen forests in the centre and north.

Key sites: Kho Yai National Park, Koen Krachan National Park, Kho Soi Dao, Nam Nao National Park, Khao Nor Chuchi, Ban Haa Chong, and Hala Bala Wildlife Sanctuary.

MOUNTAINS
Sibias, minla, and laughing thrushes are relatives of species found in the Himalayas and southern China, and can only be found in mountain forests. Following surveys of high mountain peaks in the last decade, at least 20 new species or 2% of the total have been added to the lists for Thailand.

Key sites: Phu Hin Rong Kla, Doi Chang Dao, Doi Inthanon, Doi Ang Khang, and Doi Suthep.

By visiting these emerging destinations, travellers can appreciate the avian wonders that Thailand offers and better understand the importance of the wild and not so wild areas that preserve them.

guide.doc An Insider's Guide to Enjoying Your First Birding Field Trip
By Pete Dunne

Field trips are a lot like going to a dance, and there are two schools of thought. You can just waltz onto the dance floor and let the other person lead or you can learn a few basic dance steps beforehand. Here, for those who want to get a jump on etiquette, are some of the basic rules of the birding field trip. Learn them, and you'll spend more time birding and less time tripping over your feet.

- * Rule 1 – Never miss an opportunity to use a restroom.
- Your capacity for birding may be limitless but your bladder is not. Some leaders are generous with their planned rest stops; some are miserly. Whenever the group arrives at a planned rest stop, take full advantage (and mind your coffee consumption between stops).
- * Rule 2 – Familiarize yourself with whatever pre-trip information is sent.
- Most organized field trips come with instructions. In the pre-trip material, you will almost certainly find the answers to your most pressing questions: dress, equipment needs, time commitment, lunch plans. Being prepared is the first step toward having a great time.
- Re: Clothing. Rule of thumb: In winter, if in doubt, just bring it. In hot weather, cover up for sun protection—this means hat, long-sleeved cotton shirt, long pants. At any time of year, avoid bright colors, particularly white. In the universal language of wild creatures, white means "Danger! Watch Out! Hide!" It's not the message you want to send.
- * Rule 3 – Don't be late.
- When you join a group, you sacrifice a measure of self-determination. One of the quickest ways to annoy the group leader and everyone else, is to arrive late and delay the group's departure.
- * Rule 4 – Don't wander off.
- The second quickest way to annoy the group leader is to wander off. You don't want to be left behind and you don't want to be the focus of an unnecessary search. If you plan to leave the group, for a short time or for the balance of the day, be certain you inform the leader.
- It is in your interest to stay close to the leader and the more experienced members of the group so that you can rely on their knowledge and bird-finding skills.
- Shaving close applies to car caravanning, too. The rule of thumb is one car length back for every ten miles per hour of velocity. Thirty miles per hour: three car lengths behind the bumper ahead of you. Sixty miles per hour: six lengths. Don't trust yourself to keep to pace? Don't drive. Car-pool with someone else.
- * Rule 5 – Come prepared.
- If the trip involves driving, make sure you have enough fuel to see you through. If the instructions state "Bring lunch," don't assume that you'll be able to stop at a convenience store to pick up a sandwich. Do that, and you'll likely be eating alone.
- * Rule 6 – Check out your equipment before the trip.
- The single greatest frustration first-time trip givers face is not inexperience, but rather the lousy or malfunctioning equipment – usually optics.
- If your binoculars aren't working, ask whether a loaner is available. If you don't own binoculars, do not rush out to the nearest discount store and buy some for the trip. People who do this usually end up with instruments they soon replace. Borrow binoculars for the trip. Use your field trip experience to see what instruments experienced birders are using in order to make an educated purchase later.
- * Rule 7 – Speak Softly.
- Human voices put wildlife on alert. Talking may also prevent a leader from hearing songs or calls and keep you from hearing instructions. Field trips are social and conversation is part of the field trip experience. If you want to converse, do so in whispers or stand away from the group.
- * Rule 8 – Keep motion to a minimum.
- More than sound, birds react to motion. In close proximity to birds, don't move quickly and above all do not advance until the leader gives the word. Want to draw the ire of a group? Walk toward "the bird of the day" and scare it away.
- * Rule 9 – Don't monopolize the leader.
- Sure you have questions. Sure you want to get to know the leader, and you want them to come to recognize your wonderful qualities, too. One of those qualities should be deference, because everyone in the group shares your ambition. Deference extends to use of the spotting scopes, too.
- When the leader trains his scope on an interesting bird, and you were first to get a glimpse last time, defer to others the next several times. No matter what your place in line, first looks through a scope are quick looks. After you get an identifying glimpse, step quickly aside for the next person. If the bird is moving, reposition the scope so the next user won't have to pan back and forth. After everyone has had their glimpse, more leisurely viewing is possible.
- * Rule 10 – Do ask questions.
- Leaders want to share their knowledge, and questions are the catalyst that unlocks it. Don't be intimidated by what you don't know or what you presume that others know. Chances are your question is shared by others in the group. You may not be the leader, but if you t

Tips for Nest Boxes this spring/summer

If you have old boxes in your garden, clean out any of last years nesting material or any old bits of food that may have been stored in there.

If you are putting up new nest boxes make sure that they are out of the reach of cats and Squirrels.

Check that the box isn't in full sun otherwise young birds may literally bake in the heat.

Experiment with different kinds of bird boxes – the open-fronted "Robin" boxes may even attract Spotted Flycatchers.

Make sure any boxes are at least 15mm in thickness.

Face boxes away from prevailing winds.

Don't put nest boxes to close together in a small area as this will only lead to territorial fights.

Always make sure that there is enough food and fresh water made available close by.

Do not put bird boxes with perches attached – the birds do not need them and it may only invite predators.

Never buy a bird table with a nest box built in, as nesting birds will only come into conflict with feeding ones.

Birds at the UCBG

"It's a hummingbird! But is it Anna's, Allen's or Rufous?"

Academic interest in the Garden's bird life over the last few years has primarily been associated with undergraduates studying the territorial behavior of hummingbirds. Any regular Garden visitor can tell you however, that you've never really experienced the Garden until you have taken the time to sit and just watch the birds listen to their songs and enjoy the way in which they use the Garden! Encouraged by the vast plant variety and habitat diversity, there are around seventy-six bird species regularly sighted here over the course of an average year. The hope of spotting one of the more rarely sighted birds such as the Western Kingbird or the White-throated Swift, keeps our endless parade of avid birdwatchers in thrall.

Our resident birds however, whether it's an audacious jay, a noisy woodpecker or a colorful finch, provide plenty of ongoing interest for the Garden community.

The diverse collections of the Garden support an equally diverse population of birds, as is apparent in the list from the recent Christmas Bird Count. In addition to providing general shelter for both resident and migrant species, our collection provides food and nesting sites for many different taxa. The Garden environment offers a range of habitats that are rather different from the native chaparral of the canyon. Some visitors to the Japanese Pool, such as belted kingfishers and green and blue herons, might not otherwise stop in Strawberry Canyon. Native chaparral species are found in parts of the Garden that more closely approximate their preferred habitat. Wren tits, California thrashers, and

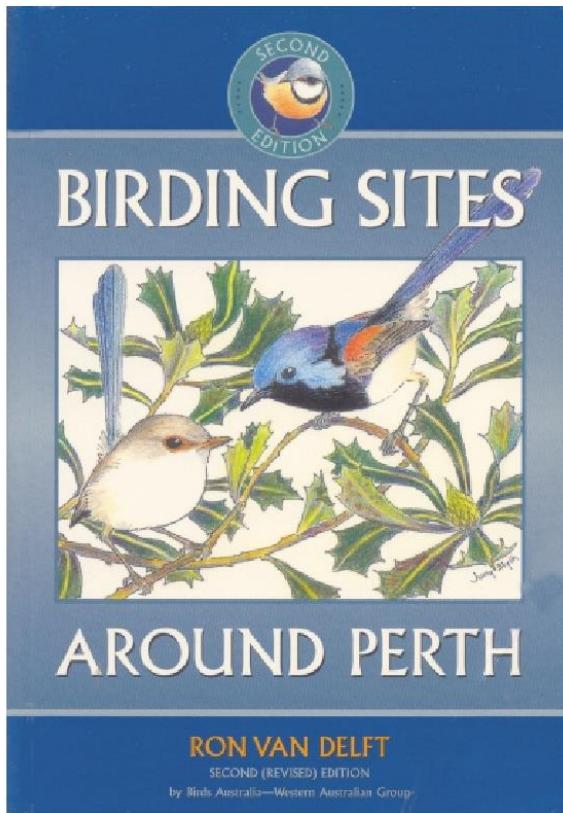

Aloes in the Southern African Area attract hummingbirds and demonstrate how birds at the Garden enjoy the diversity of plants in this collection.

spotted towhees are most commonly found in the scrubby areas of the South American and Australasian sections. Similarly, native riparian species are found in the trees along Strawberry Creek, such as Wilson's and orange crowned warblers.

Many birds have identified new food sources among the many non-native plants in our collections. This is particularly obvious when watching hum-

birds feed on both native salvias and penstemons, and also on bird-pollinated plants from other parts of the world. Aloes in the Southern African Area are pollinated by sun birds in their native habitat. These small colorful nectivores perch on the rigid blossom stalks of the aloes. This is a distinct contrast to the hovering feeding habit of the hummingbirds, which as a group are restricted to North and South America. Nonetheless, as a walk through this area at this time of the year demonstrates, hummingbirds utilize aloes extensively and assertively defend their feeding resources against other intruding hummers.

—Chris Carmichael

Bird Guides of Western Australia

Birding Sites Around Perth is a comprehensive guide to Perth's best bird watching sites, including Kings Park, John Forrest National Park and Rottnest Island.

This revised and enlarged edition describes forty-six sites within a 60 kilometre radius of the city, with excellent location maps, lists of birds regularly seen, and notes on species of special interest. Also provided are suggested bird watching tours for local enthusiasts and visitors, and a wealth of information on endemic species. Over 200 birds are featured in 165 pages.

Illustrated throughout with colour photographs and pencil drawings, *Birding Sites Around Perth* is an excellent introduction to bird watching and to Perth's wildlife heritage.

Copies of the book are available for purchase from the Birds Australia office during office hours or available by post.

WHAT IS BIRDS AUSTRALIA?

Birds Australia is a non-profit national organisation working for the enjoyment, study and conservation of Australia's birds. The WA group of Birds Australia has members statewide and offers a variety of activities for members, including conservation and research projects.

Activities and services include excursions, camp-outs, bird surveys and social activities. We also have a library, books for sale and information about birds.

To view our full range of bird guides and bird lists, visit our web site.
